THE AUTHOR.—All who have taken an active interest in the welfare of Canada must be aware how potent a personality has been that of the late Wm. Rennie, Sr., in the furtherance of the highest agriculture in this Dominion. The leading governing authorities on many occasions called for and followed his counsels on matters of serious import to Canadian agriculture, thus publicly recognizing him as an expert agriculturist of wide experience. Such a reputation, in a land of agriculturists, could only be gained by actual merit, and those who were acquainted with this pioneer of good farming are unanimous in their opinion that he was fully worthy of the position he held.

How to Order from this Catalogue

ORDER EARLY

We strive to fill all orders within a day or two after they reach us, but this is frequently made impossible by a great rush of business about planting time. Do not wait until you need your seeds and bulbs before ordering. Anticipate planting time and order early.

WRITE DISTINCTLY, using our order form if possible.

YOUR NAME AND ADDRESS in full (using Mr., Mrs. or Miss) must appear on each order. Many orders reach us lacking either or both. Customers, when writing about unsigned orders, will aid us in identification by mentioning some of the articles ordered.

KEEP A COPY OF YOUR ORDER.—Check goods received with your copy. Sometimes items may have to follow later, in which case a slip is enclosed with the goods.

CASH WITH ORDER.—Cash must always accompany the order, as we do not send goods C.O.D. This saves much trouble and confusion during the busy season, and we can fill orders better.

HOW TO SEND MONEY.—Remittances may be made by Registered Letter, Postal Note, Post Office Order, Express Order or Bank Draft, and small sums in stamps.

WE PAY THE POSTAGE on Seeds, Plants, etc., excepting those varieties specially noted otherwise. To catalogue prices of these postage must be added at the rate of 5 cents per pound to Canada.

POSTAL RATES TO UNITED STATES.—With orders for Seeds, Plants, etc., and such goods as are quoted postpaid to Canada, an additional 3 cents for each four ounces, or 12 cents per pound, must be sent when going to the United States, and on Beans, Corn, Peas, Field Root Seeds, Farm Seeds, etc., 1 cent per ounce, or 16 cents per pound, must be added for postage.

POSTAL RATES TO NEWFOUNDLAND.—Owing to the rate of postage between Canada and Newfoundland being 15 cents per pound we cannot afford to send our seeds in larger quantities than one-quarter pound by mail postpaid at Catalogue prices. The prices in this Catalogue are based on the rate of postage which prevails in Canada, 5 cents per pound. If you order seeds in larger quantities we respectfully request that you remit us 10 cents additional for every pound of seeds ordered to allow for extra postage to Newfoundland.

SENDING PLANTS.—All orders for Plants, Bulbs, etc., are filled direct from our greenhouses at Swansea. Tender plants which are liable to damage from frost will be held until about the end of April or first of May, when we begin shipping and continue as fast as the weather will

permit, until all are sent out. Should the Seeds be sent and not Plants and Bulbs, do not be impatient, as they will be forwarded when the weather will permit.

SAFE ARRIVAL of all packages. If Seeds, Plants, etc., are not received in a reasonable time, send exact copy of order, date sent, stating amount of remittance, kind of remittance (draft or money order), and the same will be investigated immediately.

EXPRESS OR FREIGHT.—All Farm Seeds, Implements, Tools, etc., and Vegetable Seeds quoted by the peck or bushel, are delivered on board cars at points from which ordered—either Toronto, Montreal, Winnipeg or Vancouver (except where otherwise noted), purchaser to pay transportation charges.

FLAG STATIONS.—Freight charges must be included in all orders for goods addressed to flag stations. Otherwise it will be necessary to reduce quantities to allow for freight, as the charges to flag stations must always be prepaid.

CORRECTION OF ERRORS.—We take the utmost care in filling orders, always striving to please our customers. In case an error is made, we desire to be informed of the fact, and promise to make such corrections as will be satisfactory. Customers will please be particular to always mention the P.O. from which order was sent, and always give order number.

GUARANTEE.—There are hundreds of contingencies continually arising to prevent the best seeds always giving satisfaction, such as sowing too deep, too shallow, in too wet or too dry soil; insects of all descriptions destroying the plants as soon as or before they appear; wet weather, cold weather, frosts, chemical changes in the seeds induced by temperature, etc. For the above reasons it is impracticable to guarantee seeds under all circumstances. We give no warranty, expressed or implied, as to description, purity, productiveness, or any other matter of any seeds we send out, and we will not be in any way responsible for the crop.

GARDENERS.—We keep a list of gardeners who are seeking situations, and shall be pleased to render assistance to our customers who may at any time require the services of a reliable and practical man.

EXHIBITORS AT EXHIBITIONS.—When customers exhibit roots or other specimens grown from Rennie's Seeds, we shall be pleased if they will kindly write for cards to affix to the specimens.

SHOULD YOU RECEIVE AN EXTRA COPY of our Catalogue, or have no use for this one, kindly hand it to someone who would likely be wanting seeds, etc.

CRITICIZE AND SUGGEST for the improvement of this Catalogue. We appreciate the kindly interest taken in the make-up of our Annual Catalogue, and are always grateful for criticisms and suggestions.

RENNIE'S TOUGH TURF GRASS SEED FOR ATHLETIC FIELDS

"TOUGH TURF" is a special blend of deep-rooting, fine-leaved, turf-forming Grasses, especially suited for ball grounds, cricket grounds, and other athletic fields. This mixture forms a thick, strong, quick-growing, enduring turf that will stand any amount of hard usage without showing wear and tear. **Lb. 30c, postpaid 35c; 10 lbs. \$2.50, postpaid \$3.00**

RENNIE'S SHADY-NOOK LAWN SEED

The bare and unsightly patches often found under trees and in shady portions of the lawn can be made to grow a luxuriant and lasting turf by the use of our "Shady-Nook" mixture. This is a special mixture of grasses that flourish best in shaded situations, and never fails to revive the dead and sour places that often ruin the effect of an otherwise perfect lawn. Sow 1 lb. to every (20 x 15 ft.) 300 ft. **Lb. 45c, postpaid 50c; 10 lbs. \$4.00, postpaid \$4.50**

RENNIE'S PURE DUTCH LAWN CLOVER

Many prefer the pure White Dutch Lawn Clover Seed to a mixture of grasses, and the fact cannot be denied that a lawn of this only is magnificent. Dutch Clover is a good thing to sow along with other grasses, as it helps to fertilize and enrich the soil, materially assisting their growth. Fancy clean seed. **Lb. 60c, postpaid 65c; 10 lbs. \$5.50, postpaid \$6.00**

RENNIE'S GOLF LINK GRASS SEED FOR PUTTING-GREENS AND THE FAIR-GREEN

We have given considerable attention to this branch of our business, and pride ourselves in having produced some of the most beautiful putting-greens yet seen in Canada. It is always a pleasure for us to give information either as to the building of a new club green or the renovating of an old turf.

RENNIE'S PUTTING-GREEN SEED

Noted for grasses with that soft, velvety appearance, and such as produce the closest possible sward. All grasses with a coarse tendency have been eliminated from our Putting-Green Seed. To make a new putting-green of standard size, 60 ft. x 60 ft., sow 40 lbs. of seed, and 10 to 12 lbs. annually. **Lb. 40c, postpaid 45c; 10 lbs. \$3.50, postpaid \$4.00**

RENNIE'S FAIR-GREEN SEED

(Fancy Quality).

This is a special mixture of the finest grasses that will stand the wear and tear and retain its velvety appearance. Many of the largest golf links in this country use this mixture. To make a fair-green, sow 75 lbs. per acre, and 20 lbs. per acre annually. **Lb. 30c, postpaid 35c; 10 lbs. \$2.50, postpaid \$3.00**

RENNIE'S BOWLING LAWN SEED

We have made a special study of Grass Seeds, and our latest introduction in the making of a first-class lawn for bowling purposes has given us a near approach to the greens of the Motherland. Rennie's Bowling Lawn Seed, which is composed of native and acclimated foreign fine-leaved, fibrous, deep-rooting Grasses that spread and intermingle, the seeds of which are blended in the proper proportions to form and maintain a tough, matted sward, constantly green, even in dry weather. Sow from 4 to 4½ lbs. per rink (12 x 100 ft.) for a new bowling green lawn; double this quantity per rink if a close matted turf is required quickly. Lb. 35c, postpaid 40c; 10 lbs. \$3.00, postpaid.....\$3.50

GRASS SEED

FANCY KENTUCKY BLUE.—This grass makes a good lawn used alone, and is preferred by many. Our well-balanced mixtures, however, have given much better results. Lb. 25c, postpaid 30c; 10 lbs. \$2.20, postpaid.....\$2.70

FANCY RED TOP.—Excellent where an immediate effect is desired. Liable to winter kill in certain sections. Lb. 25c, postpaid 30c; 10 lbs. \$2.20, postpaid.....\$2.70

FOR TENNIS COURTS, CROQUET GROUNDS, ETC.—Under congenial conditions, Rennie's Evergreen Lawn Seed will be ready for cutting in four weeks from seeding, and in six weeks ready for play.

RENNIE'S BEST XXX LAWN SEED

This is by far the best mixture of grasses offered for the purpose of quickly producing a permanent lawn. It is prepared from our own formula, and is a careful blending of varieties adapted to producing the thick growth and velvety appearance so much sought after. The grasses composing this mixture grow during different seasons of the year, so that a deep green, velvety sward is maintained year after year, and without burning brown in summer, its constant luxuriance rivaling the famous lawns of Old England. Whether you want to seed a small grass plot in your yard, or a lawn of more pretentious size, you should use this grass mixture. Lb. 40c, postpaid 45c; 10 lbs. \$3.50, postpaid.....\$4.00

RENNIE'S EVERGREEN LAWN SEED

Our "Evergreen" Lawn Mixture, originally planned for use in our grounds, has been sold by us for many years with very general satisfaction. It is a perfectly balanced combination of the best fine-leaved, deep-rooting grasses. It produces a fine enduring sward of closely interwoven, firm, deep and elastic turf, which will not burn brown in summer.

DIRECTIONS HOW TO PREPARE LAWN, TIME TO SOW, ETC., FREE ON REQUEST. Lb. 35c, postpaid 40c; 10 lbs. \$3.00, postpaid.....\$3.50
1 lb. for 300 sq. ft.; 5 lbs. for 1500 sq. ft.; 10 lbs. for 3000 sq. ft.; 15 lbs. for 4500 sq. ft.; 25 lbs. for one-fourth acre. If a very close-matted turf is required, use double the quantity. For an old lawn, half the above quantity is sufficient.

SEEDED LAWN VS. SODDED LAWN

The Dufferin Bowling Club of Brantford, Ont., have most successfully demonstrated that a green seeded with Rennie's Bowling Lawn Seed is superior to a sodded green, and testimony of their experiment has been reported by the President of the Club as follows: "Two plots of ten rinks (each 110 ft. sq.) were used. One plot was sodded and the other seeded with Rennie's Bowling Lawn Seed on May 27th. The seeded green was used July 1st, just five weeks from day seed was sown—while the sodded lawn was not in shape for at least one month after that date."

TWO CHOICE AMERICAN ASTERS

NEW ASTER—ROCHESTER PINK

SOUTH AFRICAN DAISY

(Dimorphotheca Aurantiaca Hybrida)

761. NEW SELECTED HYBRIDS, MIXED.—New and selected hybrids of this rare and extremely showy annual, which on account of its very easy culture and its beautifully colored flowers is grown and admired all over the world. They vary in color from the purest white to reddish and bluish white tints, sulphur, lemon, and bright golden yellow, light orange, reddish yellow changing to pale salmon rose, beautiful salmon shades. Pkt.....25c

DIMORPHOTHECA AURANTIACA HYBRIDA

ROCHESTER PINK

169.—This superb Aster is a branching type of Comet. The plant is vigorous and extremely free flowering; in height about eighteen inches. The magnificent flowers are borne upon long wiry stems; the color is a lovely light lavender-pink. The flowers average from three and one-half to five inches in diameter. Pkt. 25c.

CREGO'S GIANT WHITE

171.—By the most careful and painstaking selection we have, we believe, brought this beautiful Aster to a state of perfection hitherto unknown in this type; of free, sturdy growth, attaining a height of over 2 feet, well branched, with long, strong stems and artistic, fluffy, graceful flowers, rarely less than 4 inches across and frequently over 5 inches; as fine as any chrysanthemum, and when cut keep longer in good condition than any Aster of this type; in bloom from mid-August on through September; in color a pure, glistening white. Pkt.....25c

NEW YELLOW DIANTHUS

NEW DIANTHUS
(Bright Yellow)

(Heddewigii, fl. pl. Luteolus.)

731.—The numerous species of Dianthus include several garden flowers that are indispensable for their beauty and usefulness. They grow freely from seed, come very true both in color and height, and remain in full bloom for months. While yellow tints of various shades have long been represented in the Border and Perpetual Carnations, nothing of the kind has until now been developed among the Annual Dianthus. We may, therefore, claim that this novelty is the first of its kind, about 60 per cent. producing pretty bright yellow flowers, which can be readily utilized for every kind of florist's work. Pkt.....15c

CALABASH OR PIPE GOURD

943.—A rapid growing vine introduced from South Africa, the fruit of which is used in the manufacture of Calabash pipes. The gourd comes true to name. See illustration for instructions in making pipe. Pkt.....15c

BRIDAL ROSE

Not a novelty, but a very desirable house plant. A remarkable plant with leaves resembling a blackberry in shape; its flowers are produced freely and are as double as a Paeony and almost as large. Color pure white, and when a plant one or two feet high shows a score or more of these enormous flowers, which they often do, the sight is a most attractive one. Each.....25c

BLUE
RAMBLER ROSE

In habit of growth this novelty is very similar to the Crimson Rambler. A strong vigorous grower, with profuse, glossy, deep green foliage, and the effect of the plant in full bloom is marvellous. The violet-blue flowers appearing in large clusters are semi-double, of medium size, with showy, yellow stamens, making the plant most effective. So-called blue roses have been offered to the public before, but this one is here to stay, and being of such a hardy nature it will be a welcome addition to the rose family. Strong two-year old bushes, each.....75c

SOUTH AFRICAN
CALABASH OR
PIPE GOURD.

PRINCESS PANSIES

PRINCESS PANSY

1352. A class of Pansy which by its strikingly erect habit marks itself out as an entirely new departure in this most popular of garden flowers. The stalks of the Princess Pansies are unusually firm and strong; they rise vertically from the root, and the laterals group themselves closely round the main stem, thus forming a compact sheaf-like bush. The new Pansies are also remarkably hardy, standing heat remarkably well, and when after severe rainstorms other Pansies lie hopelessly prostrate, they rise again practically unharmed. The freely-produced blooms belong to the large blotched and frilled types, and they show an extensive range of color. The seedlings come almost true to type. These handsome and thoroughly distinct new Pansies will certainly be found of general interest and of permanent value. Pkt.....25c

DUPLEX SPENCER SWEET PEA

The "Best of All" Pink Sweet Peas for Bouquets.

"DUPLEX SPENCER" SWEET PEA
Four of these flowers on a stem.

1678. DUPLEX SPENCER produces uniformly large, waved flowers of true Spencer type. In color both the standard and wings are a rich cream-pink, and practically all the plants give flowers with double or triple standards. On the sprays of four blooms each (of which there is a great number) the two lower flowers are double, while sometimes three of the flowers are double. Pkt.....15c

RENNIE'S DANISH RED STONEHEAD

RED CABBAGE RENNIE'S DANISH RED STONEHEAD

This Grand Novelty is a distinct variety of Cabbage that we have introduced from Denmark. It produces round or ball-shaped heads, solid, of intense deep red color. The plant is of strong compact growth, and the heads are perfectly round, from six to eight inches in diameter. The extra dark coloring, remarkable hardness and large size of heads make it an excellent market type. ½ lb. \$2.50, oz. 75c, pkt.....10c

A NEW GARDEN PEA FROM NEW ZEALAND

RICHARD SEDDON.—16 to 20 in. Introduced by F. Cooper, Limited, of Wellington, N.Z., who say: "Richard Seddon Pea, introduced by us a few years ago, has already established itself. The largest canning factory in New Zealand is now using it in preference to all others. The pods are deep green, and are crowded with 7 to 9 large peas of the very best color and flavor; it is as early as the American Wonder, but a far more abundant yielder. We can say with confidence that there is no better all-round early variety than this." By express or mail, at buyer's expense, 10 lbs. \$3.00, lb. 35c; by mail, postage paid, lb. 40c, ½ lb. 15c, pkt.10c

NEW EARLY CABBAGE

COPENHAGEN MARKET

This superb, new Cabbage has created quite a sensation among market growers during the past season. It is undoubtedly without a rival as the finest round-headed Cabbage in cultivation. The heads average about 10 lbs. each in weight and are very solid with small core and of fine quality. A point in its favor as a market sort is that the heads all mature at the same time. As early as Jersey Wakefield and fully one week earlier than Early Summer. ½ lb. \$4.00, oz. \$1.50, pkt.....10c

MONTREAL MUSK MELON

BURPEE'S
SUNNYBROOK

BURPEE'S SUNNYBROOK

A selection of Earliana, and certainly an improvement. W. Atlee Burpee writes about it as follows: "Sunnybrook" is undoubtedly the very best earliest scarlet-fruited Tomato. Gardeners who are seeking to have good smooth Tomatoes 'first on market' can find nothing better." We offer Mr. Burpee's own seed. Oz. 50c. $\frac{1}{2}$ oz. 30c, pkt..... 10c

A New Early Tomato

Rennie's "Ninety Day"

(See illustration on back cover.)

The earliest, smoothest, hardest and best early Tomato grown. In this New Variety we have very smooth deep fruits which are ready for market five to seven days earlier than Spark's Earliana. The Tomatoes are exceptionally smooth, regular in form, and are quite deep through from stem to blossom end. The fruits mature quickly and generally can be all gathered in about three weeks from the time the first fruit ripens. This northern-grown strain of Tomato is undoubtedly the very best earliest scarlet-fruited Tomato. Oz. 80c $\frac{1}{2}$ oz. 50c, pkt..... 15c

BURPEE'S DWARF-GIANT.—The largest fruited of all dwarf Tomatoes. Fruit produced in clusters of four to six, and weigh from ten to twenty ounces each. In fact, no other tomato, excepting only the Beefsteak and Ponderosa, are as large and heavy. The color is a rich purple crimson. Plants grow vigorously, two feet high. The fruit is very meaty, solid and delicious in quality, but is so nearly seedless that the seed will always be costly. The seed we offer comes direct from Mr. Burpee, the original introducer. Exceedingly Tender.

This distinct and valuable new type, fixed after several years of scientific selecting and careful breeding, is by far the most perfect table beet yet offered. It produces uniform and perfectly globe-shaped roots, with small compact dark crimson colored leaves, smooth blood red skin and slim tap root. The dark, blood colored flesh is exceedingly tender and very sweet. It is very attractive in appearance when cooked and is temptingly tasty. Pkt. 10c, oz. 25c, $\frac{1}{2}$ lb. 75c, 1 lb. \$2.00

These stalks are delicious when cooked and served in the same manner as asparagus. In the old type of Swiss Chard the leaf portion is smooth. In this new Spinach-Beet the leaves are larger and sharply pointed at the top, while the texture is heavily crumpled or savoyed, being much greater in amount, more crisply tender and of finer flavor. The leafy portion of the foliage is cooked and served in the same manner as spinach. The leaves and stalks served as separate vegetables afford two distinct dishes from the same plants at one time. $\frac{1}{2}$ lb. 80c, oz. 30c, pkt. 10c

It comes in a few days later than Early Jersey Wakefield, but is more than double the size and of much better quality. Pkt. 10c, oz. 30c, $\frac{1}{2}$ lb. \$1.00, 1 lb. \$3.50

RENNIE'S DRY WEATHER OR DANISH DROUTH-RESISTING

—Is especially adapted for growing in dry locations where other varieties fail to produce heads. Produces a greater number of large white heads, identical with "World's Best Snowball," than any other variety. It is about one week later in heading than the Snowball. While especially adapted for growing in dry locations, it will produce heads equally as fine as the best varieties in more favorable situations. $\frac{1}{2}$ lb. \$10.00, oz. \$3.00, $\frac{1}{2}$ oz. \$1.00, $\frac{1}{4}$ oz. 90c, pkt. 25c, $\frac{1}{2}$ pkt. 15c

CAULIFLOWER

Fr.—CHOUX FLEURS. GER.—BLUMEN KOHL.

1 oz. for 2,000 plants.

CULTURE.—Considerable care is necessary to keep up a supply of cauliflowers from July to the end of the year. For early crops sow the seed in a gentle hot-bed about the middle of March, and for late crops sow in the open ground in June, and transplant like winter cabbage into rows two and a half feet apart, and two feet between each plant. A deep rich loam is the best to produce satisfactory crops of this favorite vegetable. Cauliflower will not head up well in hot, dry weather, hence the sowing should be so regulated as to bring it in either in early summer or late fall. In dry weather water frequently with liquid manure, and as they advance in growth hoe deep and draw the earth to the stems; as they begin to head, water frequently, and keep the soil open by deep hoeings, and break the large leaves over the flower to protect it from the sun and rain. On the approach of frost the plants which have not been headed may be planted out in a cellar, where they can be aired in mild weather, when they will form fine heads.

RENNIE'S XXX SNOWBALL

SURE HEADER, SOLID AND COMPACT, OUTWEIGHS ALL OTHERS.—This is the latest and best improvement of the Snowball type, and is as near perfection as appears possible in cauliflowers. It is the one variety absolutely certain to head when conditions are ordinarily favorable, and invariably forms a perfect snow-white head, averaging not less than nine inches, and often 10 to 12 inches in diameter. So deep and solid are the compact flowers that the heads outweigh any other variety. It is early, of close growing compact habit, and on this account can be planted closer, thus yielding one-third more on the same space as other strains. It is well adapted for forcing on account of its dwarf growth and short outer leaves. Besides being the best early, it is equally valuable when planted for later use, being much superior to the large, late sorts, and of finer quality. Pkt. 25c, $\frac{1}{2}$ oz. \$1.10, $\frac{1}{4}$ oz. \$2.00, oz. \$3.50, $\frac{1}{2}$ lb. \$12.00

SHORT SEASON (Quick Growing).—A splendid strain, very early, close-growing and compact, making fine large snow-white heads 9 to 12 inches in diameter. $\frac{1}{2}$ lb. \$10.00, oz. \$3.00, $\frac{1}{2}$ oz. \$1.00, $\frac{1}{4}$ oz. 90c, Pkt. 25c

RENNIE'S EARLIEST DWARF ERFURT (Extra Selected).—The earliest among early Cauliflowers. A sure header. Customers pronounce it the most profitable in cultivation. Remarkable for reliability in heading. Very dwarf, with solid, pure white heads of superior quality. $\frac{1}{2}$ lb. \$9.00, oz. \$2.75, $\frac{1}{4}$ oz. \$1.50, $\frac{1}{2}$ oz. 85c, pkt. 25c, $\frac{1}{2}$ pkt. 15c

EARLY SNOWBALL.—Second only to "World's Best" strain. More extensively grown than any other variety, both for forcing or wintering for early crop. It is exceedingly early and hardy, and is one of the surest to make a solid compact head. For these reasons it is growing more and more in favor for planting for the late summer and fall crop. $\frac{1}{2}$ lb. \$9.00, oz. \$2.75, $\frac{1}{4}$ oz. \$1.50, $\frac{1}{2}$ oz. 85c, pkt. 25c, $\frac{1}{2}$ pkt. 15c

CELERY

Fr.—CELERI.

GER.—SELLERIE.

1 oz. for 2000 plants.

CULTURE.—Sow the seed in rich, mellow soil, in the open ground, in April, or as soon as the soil becomes warm. When the plants become strong enough to set out in June or July, transplant in rows about three feet apart, and six to eight inches in the rows. The ground should have been deeply dug and made level on top previously. After setting out the plants, see that the soil is made firm around them to prevent air from reaching roots until new rootlets are formed. As plants grow they should be earthed up. Do not let any dirt fall into the heart of the celery.

The unusual solidity of the heads is insured by the large white main ribs of the leaves, each of which, curving strongly into the centre, acts like a truss, making it impossible for the leaves to open outward and expose the centre. On hottest days it is always crisp and tender. $\frac{1}{2}$ lb. 60c, oz. 20c, pkt. 5c

RENNIE'S NONPAREIL LETTUCE

RENNIE'S XXX VEGETABLE SEEDS ARE THE VERY BEST STRAINS IN EVERY CLASS

MUSK MELON

GER.—ZUCHER MELONE.

1 oz. for 60 hills.

CULTURE.—Select a light, sandy, rich soil, after danger of frost is over and the ground has become warm and dry; plant in hills four to six feet apart each way, six to twelve seeds to the hill. When up and all danger of insects has passed, pull all out except three plants. Cultivate until the vines cover the ground, and pinch the ends off the growing shoots to induce early fruiting. Ashes, lime, or even dry dust is excellent to sift over the young plants when the dew is on to prevent the attacks of insects. Do not plant near pumpkins or squash.

RENNIE'S XXX GOLDEN GREEN FLESH MUSK MELON

Spicy Golden Green Flesh. Small Seed Cavity.
Exceedingly Productive.

This remarkable new Musk Melon is the happy result of careful and clever hybridizing, followed by several years of critical selecting. It shows marked points of merit for size, shape, netting, appearance, flavor, depth of flesh, smallness of seed cavity, productiveness and shipping qualities. The firm deep flesh, which extends from the rind almost to centre of the melon, cannot be equalled for its rare spicy flavor and melting tenderness. Adding to this its extreme earliness and handsome appearance, we feel warranted in claiming it as the finest musk melon ever introduced. Pkt. 10c, oz. 35c, $\frac{1}{2}$ lb. 90c

MUSHROOM SPAWN

CULTURE.—Secure manure fresh from the horse stable. Keep it dry (under cover). Turn over once every day for one week to keep it from burning. The eighth day take four parts manure to one part old rotted sod, sifted through three-quarter inch sieve. Mix thoroughly. Make up beds nine inches deep, well firmed. As the spawn runs best when bed is perfectly dry, do not moisten. Place thermometer in the bed, and when temperature goes down to 80 degrees set in the spawn two inches deep in pieces the size of a walnut, then cover the surface with one inch of loam. Leave dry for three weeks. Then imitate nature as nearly as possible and spray lightly and carefully, something like heavy dew, with water at 80 to 90 degrees. In six weeks the mushrooms should appear. The bed will last three to four months. Mushrooms need a dry place, free from any drip. More harm than good is the result of not watering carefully. Keep temperature of room about 60 degrees.

AMERICAN PURE CULTURE SPAWN.—This type produces larger mushrooms and is more prolific than the English, bearing much earlier, and continuing to crop for a longer time. This spawn is produced by selecting spores from individual specimen mushrooms and is propagated and transferred to the bricks of manure, which, when planted, produce mushrooms all of one type. We offer two grades: **STANDARD**, per brick 25c, doz. \$2.50; by mail 35c, 5 for \$1.60. **DIRECT**, per brick 30c, doz. \$3.00; by mail 40c, 5 for \$1.85

ENGLISH SPAWN.—We make a specialty of supplying the genuine English "Milltrack" Mushroom Spawn, and receive several importations a year. Spawn fresh and genuine at all times. A brick weighs $1\frac{1}{2}$ lbs. and plants 2 feet by 3 feet. Per brick 20c, 5 for 90c; by mail, brick 30c, 5 for. \$1.35

MARKET-MAKER GOLDEN GLOBE ONION

RENNIE'S MARKET-MAKER GOLDEN GLOBE

REMAINS SOUND THE YEAR ROUND

Our illustration shows well the size and shape of this new variety, and any understanding market gardener will readily see that in appearance the "MARKET-MAKER" is far in advance of any other sort.

In color the skin is an attractive, light golden yellow, the flesh snow white, firm, mild and juicy. The very small necks of this superior strain enable the bulbs to ripen down evenly, thus insuring unsurpassed keeping qualities. It ripens much earlier than any other globe variety; matures with surprising uniformity, and nearly every bulb throughout the entire crop will be of the same uniformly moulded shape and marketable size. Its keeping qualities cannot be surpassed—the onions remain sound the year round if properly kept. Lb. \$2.00, $\frac{1}{2}$ lb. 70c, oz. 25c, pkt. 5c

GIANT PRIZETAKER.—Outside skin yellow straw color; flesh white, sweet, mild, and tender. They bottom well, and are free from stiff necks, and produce onions averaging 2 lbs. each. Lb. \$2.00, $\frac{1}{2}$ lb. 70c, oz. 25c, pkt. 5c

RENNIE'S PROSPERITY OR GRADUS

THE EARLIEST WRINKLED OR MARROW PEA GROWN

SWEET, LUSCIOUS, TENDER

The vine of Prosperity is of vigorous, robust growth, about 2½ feet high, heavy-stemmed with luxuriant healthy foliage; it bears uniformly large, handsome pods of large and luscious peas, and although it commences bearing so very early it continues for a long time; the peas also remain sweet and tender for some time after they are fit to pick. Being of an exceptionally vigorous and hardy constitution, it may be sown with first earlys, coming in but three or four days later than the round, hard shell sorts. The plants are of robust, half dwarf habit, growing about 15 inches high, with sturdy branching stalks that are practically self-supporting, so that trellis or brush is not essential. The peas retain their rich green color when cooked, appearing especially attractive when served, while the tempting, delicious, melting quality and superb rich buttery flavor is unequalled by any other pea of American origin. RENNIE'S XXX SCARLET ROUND WHITE TIPPED RADISH

RENNIE'S XXX SCARLET ROUND WHITE TIPPED

A Greatly Improved Outdoor Strain.

This superior strain has been specially developed for outdoor cultivation, and will be found a great improvement over the ordinary kinds. When bunched they immediately arrest attention by their attractive appearance, being perfectly round in shape, bright scarlet in color, with a distinct white tip which makes a vivid contrast. The mild, crisp white flesh is of excellent flavor, and never takes on that strong rank flavor so often noticed in the later varieties. Pkt. 10c, oz. 20c, $\frac{1}{2}$ lb. 50c, lb. \$1.50

RENNIE'S XXX SCARLET OVAL

Outdoor Strain.

This is a fine, new, bright red radish, which grows quickly to a large size, weighing up to one ounce per bulb, or about four times the weight of any other early sort. Notwithstanding its great size, it does not get hollow or pithy, but the sparkling white flesh remains solid, crisp and juicy, and very mild in flavor. This radish is slightly oval or a deep globe in shape, two inches in depth, one and a half inches in diameter, with tender skin of a rich, deep crimson color. While rather too large for forcing under glass in winter, it is certainly the most profitable variety for early plantings in the open ground. Pkt. 10c, oz. 20c, $\frac{1}{2}$ lb. 50c, lb. \$1.50

EXTRA EARLY VARIETIES

Fr.—TOMATE. GER.—LIEBESAPFEL.

1 ox. to 1,500 plants.

CULTURE.—Sow in a hot-bed in March; when two inches high transplant into pots, boxes or another bed, and attend to them carefully until danger of frost is past, then transplant them permanently into a warm situation, fully exposed to the sun. BLUE STEM EARLY TOMATO

The tomatoes are of large size, always smooth, of firm flesh and few seeds; color a fine glossy rose. A rapid seller on any market, and it stands shipment remarkably well. We can say that our crop of plants this past season were literally loaded with fruit. $\frac{1}{2}$ lb. \$1.75. oz. 50c, $\frac{1}{2}$ oz. 30c, pkt. 10c

SHORT-SEASON EARLIEST TOMATO

RENNIE'S XXX EARLIEST ROUND SCARLET SKIN TOMATO

RENNIE'S XXX EARLIEST ROUND SCARLET SKIN

This splendid new sort will yield the first pickings of ripe tomatoes, and that at a time when the very highest prices can be got. As its habit is open, the numerous clusters of fine large fruits are fully exposed to the warm sunshine, thus ripening early and thoroughly right through from stem to blossom end. The flesh is remarkably solid, with very few seeds and of particularly fine quality, meaty and tasty. Where more than one variety is grown, Rennie's XXX should certainly head the list. Pkt. 15c, $\frac{1}{2}$ oz. 35c, oz. 60c, $\frac{1}{2}$ lb. \$2.00

EARLIBELL.—Proved to be one of the earliest tomatoes in cultivation. It is equal in quality to any of the second earlies, and nearly equal to the best main crop varieties. The flesh is very solid, with comparatively few seeds, and of fine sweet flavor; skin thin, but sufficiently strong to make it a good shipper. SHORT-SEASON EARLIEST.—Quick growing. An extremely early tomato that grows enormously prolific, smooth and uniform, of a bright scarlet color, of very great solidity, and has a fine flavor. $\frac{1}{2}$ lb. \$1.50, oz. 40c, pkt. 10c

SWEET, POT AND MEDICINAL HERBS

Every garden should contain an assortment of herbs for culinary and medicinal purposes, and care should be taken to harvest them properly. This should be done on a dry day, just before they come into full bloom, then dry quickly and pack closely, entirely excluded from the air.

CULTURE.—Sow in spring in shallow drills, one foot apart, and when well up thin out and transplant to a proper distance.

Rennie's Leviathan Sugar Beets, grown on Rennie's Gold Medal Farm in Scarboro, yielded 1008 bushels per acre in 1912. Field tests of various Root Crops are made annually by our Mr. James A. Rennie on this farm.

RENNIE'S JUMBO

One of the finest types of Giant Feeding Sugar Beet that have yet been introduced. The immense roots are white fleshed, shading to a green at the upper part; growing but a few inches in the ground they are easily harvested, and the close formation of the leaves at the crown render them very easy to top. Lb. 45c. By mail, $\frac{1}{2}$ lb. 18c, $\frac{1}{4}$ lb. 30c, lb. 50c.

RENNIE'S GIANT SUGAR MANGEL.—This very popular variety is valuable alike either as a milk producer or as a flesh former. Stands at least three-fourths out of the ground, with a rich pink and white skin. The flesh is firm, very sweet, and greatly relished by all classes of stock. Lb. 45c. By mail, $\frac{1}{2}$ lb. 18c, $\frac{1}{4}$ lb. 30c, lb. 50c.

SUGAR BEETS for Feeding

Fr.—BETTERAVE FOURRAGERE SUCRIERE.

Sow 4 to 6 lbs. per acre.

RENNIE'S LEVIATHAN SUGAR BEET

This grand new type of Feeding Sugar Beet excels in growth, size, shape, yield and nutriment. It contains more nutriment than other sorts, being simply saturated with sugar; is larger than its nearest rival. The shape of the root is perfect, and its habit of growth renders it easy to harvest. There are no coarse prongy roots; in fact, the beet is as smooth as if moulded. The skin is red, the flesh white, close grained, solid and tender. In yield it is equal to our now famous "Jumbo." We have had many critical tests made with it in this country, and the carefully tabulated results have proved that it surpasses all other varieties as a stock feeder. Lb. 55c. By mail, $\frac{1}{2}$ lb. 20c, $\frac{1}{4}$ lb. 35c, lb. 60c.

RENNIE'S IMPROVED GIANT.—A giant type of sugar beet, yielding an immense crop of giant-sized roots of the most excellent feeding quality. The heavy, even-shaped roots grow three-fourths of their immense size out of the ground. In color, the roots are of a bronzy-green at the top, shading from a light green to a rose-blush tint just above the ground. The flesh is white, solid, tender and very sweet. Lb. 45c. By mail, $\frac{1}{2}$ lb. 18c, $\frac{1}{4}$ lb. 30c, lb. 50c.

RENNIE'S DANISH SUGAR BEET.—For fattening purposes and for feeding to milch cows this variety is one of the best in cultivation. Color, deep pink above ground, below that it is white. Lb. 45c. By mail, $\frac{1}{2}$ lb. 18c, $\frac{1}{4}$ lb. 30c, lb. 50c.

RED TOP.—Good variety. Lb. 45c. By mail, $\frac{1}{2}$ lb. 18c, $\frac{1}{4}$ lb. 30c, lb. 50c.

WHITE SILESIA (Green Top).—A standard variety. Lb. 45c. By mail, $\frac{1}{2}$ lb. 18c, $\frac{1}{4}$ lb. 30c, lb. 50c.

BEETS FOR SUGAR MAKING

IMPROVED WANZLEBEN.—Best variety to grow for the manufacture of sugar. Lb. 50c. By mail, $\frac{1}{2}$ lb. 18c, $\frac{1}{4}$ lb. 30c, lb. 55c.

OUR JUMBO AND LEVIATHAN SUGAR BEETS HAVE AGAIN TAKEN THE LEAD

RENNIE'S MAMMOTH SHORT WHITE CARROT

The roots are of an immense and uniform size, clean, broad and heavy at the shoulder, tapering smoothly to a point. A sure cropper and extra heavy yielder, valuable alike for its excellent long-keeping qualities and the high percentage of nutriment contained in the rich, white flesh. **Lb. \$1.75. By mail, 2 oz. 30c, ½ lb. 55c, ¾ lb. 95c, lb. \$1.80**

MANGEL WURZEL

Fr.—BETTERAVE FOURRAGERE.

Sow 4 to 6 lbs. per acre.

CULTURE.—Mangels delight in a deep, rich clay loam. The heaviest crops are invariably grown upon land which has been liberally manured and thoroughly cultivated. Artificial manures applied at the rate of from 500 to 1000 lbs. per acre, with the addition of 300 to 400 lbs. of salt, will increase the yield per acre to a very large and profitable extent. Sow any time from the middle of April to the end of May, in drills from 2 to 3 feet apart, covering the seed a uniform depth, and thin plants from 12 to 15 inches in the row.

RENNIE'S GIANT YELLOW HALF LONG MANGEL

The admirable shape of the root, combined with the small top, permits of the crop being left closer in the rows than is possible with most varieties. Roots clean, well-shaped, stands more than two-thirds out of the ground, and having but a single tap root are harvested with less trouble than almost any other Mangel. Splendid quality. We recommend it. **Lb. 45c. By mail, ½ lb. 18c, ¾ lb. 30c, lb. 50c**

RENNIE'S YELLOW LEVIATHAN MANGEL

Root long, olive-shaped, growing over one-half out of the ground—flesh white, sweet and tender—top green, comparatively small—neck small and short. **Lb. 45c. By mail, ½ lb. 18c, ¾ lb. 30c, lb. 50c**

FIELD CARROTS

Fr.—CAROTTE (DES CHAMP).

Sow 3 to 4 lbs. per acre.

CULTURE.—Sow seed in drills, eighteen to twenty-four inches apart, from the middle of April to the first of June, and when about three inches high thin out from four to six inches apart. Carrots require deep, rich, loamy soil to produce heaviest crops, and should be prepared and manured in the fall preceding the carrot crop.

COOPER'S YELLOW INTERMEDIATE.

SWEDE TURNIPS (Ruta Baga)

Fr.—CHOU DE SIAM.

Sow 2 to 4 lbs. per acre in drills.

CULTURE.—The soil best adapted for all Turnip crops is that of a loamy description, but may be grown upon heavy clay soils if given thorough cultivation. Sandy and gravelly soils will yield but a light crop. The ground should be manured and prepared in the fall so as to avoid rough and forked roots. The seed may be sown upon drills twenty inches apart, or upon the level ground; the latter is best upon dry or well-drained soils. Sow Swedes from June to middle of July, and Aberdeens, Globes and Greystones from middle of July till end of August. Thin from twelve to eighteen inches apart in the row.

RENNIE'S EMPRESS Has become a favorite with leading root growers of Canada. Its heavy cropping and fine feeding qualities commend it to farmers generally, and for winter feeding it is unexcelled. SAND VETCH.—Should be sown in the spring alone or mixed with Oats, Spring Rye or Barley, or during August or September with Winter Rye, because this Vetch, reaching a height of 3½ to 5 feet, must have a support. It is exceedingly nutritious, much more so than clover, is eaten with relish, and may be fed with safety to all kinds of stock. Makes a valuable hay crop in dry seasons. It is extensively used in the fruit districts of Ontario (sown in August) for ploughing under in spring to enrich the land. Sown alone needs 60 lbs. to acre. **Lb. 20c, by mail.** For larger quantities see page 50.

Largely grown in the Western States. An excellent food for hogs. Produces as many as 100 bushels of seed on one acre. The seed ripens while the fodder is yet green. It ripens early and yields heavy crop of fodder. Sow 12 lbs. per acre. **Lb. 10c, by mail.**.....15c

JAPANESE MILLET

TRUE JAPANESE MILLET (PANICUM CRUX GALLI).—Entirely distinct. It grows 6 feet, yields 10 tons green fodder per acre. When cured it makes an excellent quality of hay, and is a much relished green fodder. Cure as you would a heavy crop of Clover. It may be sown from the middle of May to the first of July, broadcast, at the rate of 15 lbs. per acre; but it is better to sow it in drills, 12 to 18 inches apart, using 10 to 12 lbs. per acre, and cultivate until 15 inches high, when its rapid growth will smother all weeds. **Lb. 15c, postpaid.**.....20c

GERMAN MILLET

GOLDEN MILLET.—Grows 4 to 5 feet high, yielding an abundance of leaves; heads closely condensed; spikes numerous; seeds round, golden yellow, in rough sheaths. Sow 30 lbs. to the acre. **Lb. 10c, by mail.**.....15c

EVERGREEN BROOM CORN

This variety of Broom Corn is more largely grown than any other. The brush is noted for its fine quality, good length and handsome appearance; cut before the seed is ripe, it is a beautiful pea-green color. Brush very fine and seldom gets crooked. It ripens early and yields heavy crops. **Lb. 10c, by mail.**.....15c

EARLY SOY BEANS

Of extra value for Stock Feeding.—It grows nearly 4 feet in height, heavily podded, and has yielded over 10 tons per acre. Is a very valuable fodder variety, either for curing, feeding green, or for the silo in mixture with corn. Sow broadcast 30 lbs. per acre, or plant in drills 3 feet apart, 1 foot between plants. **Lb. 15c, by mail.**.....20c

COW PEAS

WHIP-POOR-WILL.—The earliest maturing variety. Highly valued for fodder and for reclaiming old and worn-out land. The seed is ground and used for cattle fodder; the stalk and leaves also make excellent fodder fed green. A great soil invigorator. Sow 30 lbs. per acre. **Lb. 15c, by mail.**.....20c

THOUSAND-HEADED KALE

THOUSAND-HEADED KALE

Unsurpassed for sheep. In Britain it is preferred to Sowing Rape, which it largely out-yields.

Has given splendid results in most sections where grown the past season. Its chief characteristics consist in its producing tremendous masses of sprouts or heads, upon which the long, large leaves of foliage of great richness and food value are grown. Eagerly sought and eaten by sheep and cattle. It is harder than rape, and therefore becomes at once a magnificent plant to sow in conjunction with rape. You can figure to pasture sheep and cattle and hogs and poultry a month to eight weeks longer by having a few acres of Thousand-Headed Kale than you can on rape alone. Sow in the early spring. Plant with a drill, dropping the seeds about six inches apart in the row, and the rows 2 ft. apart. One pound in this way will be sufficient for an acre, but if you wish to sow it broadcast you ought to sow 2½ lbs. per acre. **Lb. 30c; by mail, lb. 35c, ½ lb. 20c, ¼ lb. 12c.**

EARLY SOY BEAN

GROW YOUR OWN STOCK FOODS—IT'S CHEAPER

SOWING RAPE

TRUE DWARF ESSEX.—Best broad-leaved variety. It has been estimated that an acre of Dwarf Essex Rape, when not preceded by any other crop the same season, will feed from 35 to 40 lambs for two months, and that the gain in flesh per month will be from 8 to 12½ lbs. on each lamb. Young cattle thrive on it as well as swine.

Rape should be sown broadcast at the rate of 10 lbs. per acre, or in drills two feet apart 5 lbs. per acre, from June until the middle of September, and forms an excellent green fodder for sheep in autumn or early winter. It is also used extensively for ploughing under to enrich the land.

Rape is unequalled as a pasture for sheep in the autumn; as a fattening food in the field it is without a rival in point of cheapness or effectiveness. Cattle may also be pastured upon rape, but, through treading, they destroy and waste it in a considerable degree. Because of this it is better to remove them to an adjoining pasture when they have satisfied their wants. The results are usually very satisfactory when they are pastured upon it in the day only, and fed in the stable or shed in the morning before going to the rape pasture. This is an excellent way of making Christmas beef. Rape will keep a long time in early winter in heaps like shocks of hay. When thus put up it may be drawn and fed as desired. **Lb. 15c, by mail.....20c**

(FOR LARGER QUANTITIES SEE PAGE 50.)

SORGHUM

SUGAR CANE (EARLY AMBER).—The value of sugar cane for fodder and ensilage is rapidly becoming known. Excellent green feed for cattle. Sow when ground is warm. Sow 20 lbs. per acre. **Lb. 10c, by mail.....15c**

LATHYRUS SYLVESTRIS

LATHYRUS SYLVESTRIS

Two cuttings in one season. Vast amount of rich hay secured from small area. Affords excellent pasturage. Mature plants root 20 feet deep, and stand severest droughts and extreme cold. Earlier than Alfalfa and continues later. Lasts 50 years without re-seeding. Sow 20 lbs. per acre. **Lb. \$1.35, by mail \$1.40, ½ lb. 75c, ¼ lb. 45c, oz. 15c, pkt.....5c**

TARES OR VETCHES

For producing an abundance of Green Fodder early in the season, Tares are in great demand. Sow 1 bushel to the acre, with a bushel of oats to hold them up. **Lb. 10c, by mail 15c.** Bushel prices on page 50.

SEED CORN

EARLY FLINT VARIETIES

COMPTON'S EARLY (12-Rowed).—The productiveness of the Compton is remarkable, with more rows to cob than any other Flint corn. The grains are very small, round and heavy. It is very hardy, and sure to grow and produce a crop 8 to 10 feet. 2 lbs. 25c, 5 lbs. 60c, postpaid. Bushel price, page 50.

EXTRA EARLY AUSTRALIAN (8-Rowed).—A superior variety, having given unequalled satisfaction to those who have tried it. Remarkably early, ripening fully two weeks ahead of Compton's. It is unusually productive, the ears being very long, the grain large, and the cob small. Hardest variety known; will thrive at an altitude of 8,000 feet, where the climate is always too cold for ordinary corn. A great drought resister; will produce crops where other sorts fail. Lb. 20c, 3 lbs. 50c, 8 lbs. \$1.00, postpaid. Bushel price, page 50.

LONGFELLOW (8-Rowed).—A splendid yellow Flint variety, with ears 15 to 20 inches long, cob small, kernels quite broad. 2 lbs. 25c, 5 lbs. 60c, postpaid. Bushel price, page 50.

NORTH DAKOTA (8-Rowed).—A grand white Flint variety, matures early, yields enormously, produces a large number of good ears and a smaller number of poor ears than any other variety. 2 lbs. 25c, 5 lbs. 60c, postpaid. Bushel price, page 50.

NORTHERN PROLIFIC CORN

YELLOW FLINT CORN (8-Rowed).—Ripens in 90 days, and yields surprisingly large quantities of corn on such small cobs. The cob is the smallest of all Flint Corns. The corn is a beautiful rich golden color. The best ninety-day corn up to date. Sow 20 lbs. per acre. Lb. 20c, 3 lbs. 50c, 8 lbs. \$1.00, postpaid. Bushel price, page 50.

WHEAT

RED FIFE.—Early, vigorous, highly productive. We have an extra fine sample of this well-known variety: carefully selected and of specially high grade. 2 lbs. 25c, postpaid. Bushel price, page 50.

WHITE FIFE.—Matures a little earlier than Red Fife, and is specially suitable for districts liable to early frosts. 2 lbs. 25c, postpaid. Bushel price, page 50.

NORTHERN PROLIFIC CORN

SEED FODDER CORN

TESTED FOR GERMINATION
SELECTED FOR SEED

For ensilage purposes and for cutting green the Bailey and Wisconsin No. 7 Sorts are the earliest and most profitable. Planted in the West, both varieties have given splendid results. The seed we offer is Ontario grown. They are heaviest yielders and better adapted for Canada than any other Dent kinds. For prices see page 50.

WISCONSIN No. 7 FODDER CORN

SPELTZ OR EMMER

Has given splendid good results in the North-West. For fattening cattle, poultry, horses, sheep, pigs, etc., it is claimed to be ahead of other grains. Yields well and makes excellent pasture. Sow at the rate of 50 to 60 lbs. per acre. 1 lb. 15c, 3 lbs. 40c, postpaid.

MARQUIS WHEAT

THE NEW WHEAT OF THE WEST.—This new variety is a cross between Red Fife and Hard Red Calcutta Wheat. From reports received where it has been thoroughly tested the past season it has given great returns. Ripens earlier than Red Fife, and as a milling wheat it is identical with it, producing a flour equal if not superior to Red Fife. The heads are bald, kernels dark red, hard and good size. The chaff is yellow and the straw medium in height and very stiff. A yield of 53½ bushels to the acre is recorded at Indian Head Experimental Farm. Lb. 20c, 3 lbs. 50c, postpaid. For peck and bushel prices see page 50.

NEW WHITE
WAVE OAT

White Wave THE "ALL-MEAT" OATS

**THIN HULLS. WEIGHS MORE TO THE MEASURED BUSHEL THAN ANY OTHER SORT
YIELDS WELL ON POOR LAND AND IMMENSE CROPS ON GOOD SOIL.**

OUR ILLUSTRATION DOES NOT SHOW THE BRANCHING EFFECT OF THE HEAD AS WELL AS WE WOULD LIKE.
IT IS NOT A SIDE OAT, BUT A HEAVILY-LOADED, SPRANGLED CLUSTER.

Immense yields were reported in nearly every instance where White Wave was sown last season. It is no easy task to introduce a new Oat nowadays. There has been one new sort after another sent out and very few varieties have stood the test like the old American Banner. We well remember introducing this popular Oat to the Canadian public some years ago. Now, we are not going to say that this new imported Oat will last like the Banner, but we do say it will please. We like the big and meaty kernel (because this is where we get the feed). Again, the thin hulls appeal to us. We hesitate to recommend an oat with thick hulls. The straw of White Wave also appeals to us. Strong and wiry, yet not too coarse to be objectionable. Stands up well. Another good point in this new Oat's favor is its earliness (not the earliest in existence), but it ripens its crop evenly and a little ahead of most kinds. As a yielder it fills the bill, cropping splendidly on moderate land and easily over a hundred bushels to the acre on good soil. If you are going to try a new oat this year get a few bushels of White Wave. Our seed is very fine, and you will travel the country a long time to see its equal.

Lb. 25c, 3 lbs. 60c, 6 lbs. \$1.00, postpaid.
Peck and bushel prices, see page 50.

THE BUMPER KING OATS

This valuable new White Oat from Northern Ireland has been the admiration of all who saw it growing. As a result our growers were besieged on all sides for seed this coming Spring. It is a well-known fact that it pays to renew oats every year, especially if seed can be had from abroad, as it will make a difference of twenty bushels or more per acre in the yield. Bumper King is of medium length of straw, stands up well, has a large, full, compact head filled with large plump grain, enclosed in a soft thin hull, and shows but little beard. We look upon this variety as one of great promise. This oat weighs about 40 lbs. to the bushel, and is quite distinct from any variety hitherto introduced. Under the most strenuous tests has established a reputation for the earliest, heaviest, and most prolific oats in cultivation. Lb. 25c, 3 lbs. 60c, 6 lbs. \$1.00, postpaid. Bushel prices, see page 50.

DODD'S WHITE OATS STANDS UP DURING THE HEAVIEST STORMS.

Originated with a Scotch farmer, who selected it on account of its wonderful size. Has been thoroughly tested and approved for the North and North-West. Has yielded 4,752 lbs. of cleaned seed per acre. This is 108 bushels of 44 lbs. each, or nearly 140 bushels of 34 lbs. each. The large white grains are immense, plump and handsome. The straw is very strong, and, consequently, during the heaviest storms, stands up well, and does not lodge or twist readily. Lb. 20c, 3 lbs. 50c, 7 lbs. \$1.00, postpaid. Bushel prices, see page 50.

BRISTOL BLACK.—Handsome, plump, jet-black Oats. Selected on account of its enormous size from a field of Black Tartarian, and promises a revival of old-time yields, when 70 and 75 bushels, and even as high as 85 bushels, to the acre were not uncommon. It grows stiff and strong straw. The side heads are long and heavy laden, sometimes nearly a foot in length. Lb. 20c, 3 lbs. 50c, 7 lbs. \$1.00, postpaid. For peck and bushel prices, see page 50.

"FIFTY-POUND" BLACK OATS.—Just what its name implies. Oats weighing 50 lbs. to the measured bushel are not very common, but when we state that this new variety rarely produces lighter oats, farmers generally will be anxious to try it. "Fifty-Pound" is a first-class cropper, with strong, stiff straw and heavy side heads. Lb. 25c, 3 lbs. 60c, 6 lbs. \$1.00, postpaid. For peck and bushel prices see page 50.

RENNIE'S EARLY YIELDER WHITE OATS

THE GREATEST OF ALL YIELDERS

This superb variety is undoubtedly the heaviest cropping White Oat ever offered.

It is practically immune from rust, is the earliest and most bountiful cropper of the heavy-growing sorts.

One of the largest and most experienced Oat growers in Ontario says: "Its wonderful productiveness is far beyond what the most enthusiastic farmers ever expected to realize." One of the fields after threshing and cleaning of seed the yield was **108 bushels per acre** of large, plump, handsome, meaty, white grain, weighing **44 pounds** to the measured bushel. The yield of other varieties on neighboring farms was from 35 to 50 bushels per acre, or less than one-half that of Rennie's Early Yielder. Being a very deep rooter, it **resists drought** more easily than others. The grains are absolutely white, thick and plump, and have a very thin hull, making them most valuable as a feeding Oat. The straw is long, stout, and consequently stands up well, and does not lodge or twist. The Early Yielder Oat is very remarkable for its heavy stooling property, and for this reason 6 pecks (1½ bus.) is sufficient to seed an acre. **Lb. 25c. 3 lbs. 60c, 6 lbs. for \$1.00, postpaid. Peck and bushel prices on page 50.**

LUCERNE CLOVER

RYE GRASS FOR HAY

The use of Perennial Rye Grass for hay is very limited amongst the farmers of Canada. Those who have tested it have been so successful that more attention will certainly be paid to it in the future. In England it is grown extensively, and is much preferred to Timothy. Grows to a height of about two feet, and will thrive on any soil and in any situation. In growing for hay, Rye Grass should be cut and cured when in flower, as if allowed to ripen the seed it is much less nutritive. In quality it is equal to the best Timothy, and while the yield of the first crop under similar circumstances would be greater than Timothy, Rye Grass has the additional advantage of yielding an abundant aftermath (pasture). This characteristic alone is sufficient to encourage its cultivation. The seed being light (weighs 22 lbs. per bushel), should be sown at the rate of about 25 lbs. per acre, or if Clovers are added, a smaller quantity will suffice. We feel assured if Rye Grass is once tried it will in a very short time become most popular with agriculturists in this country. **Lb. 20c; by mail, lb. 25c. For prices per bushel (22 lbs.) see page 50.**

Alfalfa or Lucerne Clover The Farmer's Money Maker

(Lucerne Clover) (MEDICAGO SATIVA).—Reports from the North-West prove it to be one of the most desirable forage plants ever introduced. It stands drought and dampness, and succeeds during hot, dry weather, when many other clovers and grasses fail entirely. Heavy rains or snows have no damaging effect whatever, and simply make it flourish more than ever. The roots sink down into the earth searching for nourishment, and bringing to the surface the chemicals and fertilizing materials that have been stored 10 to 15 feet deep. **One seeding stands for years. All cattle are fond of it. Sow with oats at the rate of 15 lbs. per acre.** The first season the growth will be very light, but the next season you will probably get from 3 to 5 tons per acre, and it increases for several years, producing very large yields. Can be cut three or four times in one season. Unequalled for sowing on side hills or dry soils. As Alfalfa is a warm-weather plant, do not sow until ground has become warm. May or June are best months when sown alone. Not adapted to low, wet soils. **To Pasture Alfalfa.**—Sow 5 lbs. Orchard Grass with 15 lbs. of Alfalfa. The Orchard Grass will protect the crown of the Alfalfa roots so that pasturing will not injure it to such a great extent.

RENNIE'S XXX ALFALFA SEED (Northern Grown).—Lb. 30c, by mail..... 35c

TURKESTAN ALFALFA.—Claimed to yield far heavier crops than ordinary Alfalfa or Lucerne. Has withstood the severest winters—40 degrees below zero when the ground was bare. **Lb. 30c; by mail, lb..... 35c**

GRIMM'S ALFALFA.—A selection of Alfalfa claimed to be superior to others, both as to productiveness and extra hardiness, surviving severe winters where other varieties killed out. The seed we offer is northern grown, and without exception the finest obtainable. **Lb. 50c; by mail, lb..... 55c**

FOUNTAIN COMPRESSED AIR SPRAYER

NEW IDEAS IN SPRAY PUMPS

JUNIOR NO. 5.—This pump requires no fastening of any kind; holds itself down and works anywhere and everywhere. All the operator need do is to press the plunger down. It rises of itself, the upward stroke being made by a brass spring forcing the cylinders apart. The all-brass section working within a brass cylinder with all-brass valves does away entirely with all leather, rubber, or other packing. It is practically impossible for any part to get out of order. Everything except handle and hose is solid brass. Is the easiest working and will do more different kinds of work than any pump ever made. Will pump from a pail, barrel, trough, creek, spring, boat or sink. Price for Pump complete, as shown in cut. \$4.00

VICK'S WHITE KING ASTER

167. This novelty is similar in habit to the popular Branching Asters, vigorous in growth, with long stiff stems, and luxuriant foliage of richest green. In form the flower is **entirely distinct**; petals somewhat resemble the quilled varieties, but are much larger and broader, those in the centre being fantastically twisted, curled and incurved, completely covering the crown. The bloom is round, full and very large, many of the flowers measuring five inches in diameter. Keeps fresh a long time and is sure to be popular among commercial florists. Pkt.....25c

VICK'S WHITE KING ASTER

CREGO ASTER

166. The Crego Aster is the largest flowered type of any Branching Asters. The immense flowers have double length petals, ruffled, twisted, curled. Many blooms measure 5 to 6 inches in diameter. All plants come true to type. Mr. Crego's methods of seed selection are unsparingly systematic, hence the stock of seed is even yet very limited. Mr. E. C. Ambling, of Chicago, a well-known commission florist, has handled Crego Asters for several seasons; in his opinion, based upon cash returns, they are "the best yet." From a little patch in a private garden 775 blooms were cut, which realized \$40.25. Originator's stock seed. **Mixed colors**. Pkt.....25c

NEW COMET ASTER TRIUMPH OF PARIS

222. Up to the time of the introduction of this grand novelty it seemed that Asters of the giant comet type had been developed as near perfection as possible, but the new "Triumph of Paris" far out-rivals all its best predecessors. We know no other type which is so strikingly handsome as a cut flower. The plant produces immense flowers, often six inches across, with long pure white outer petals, in the centre a bright golden yellow. 24 in. Pkt.....25c

VICK'S ENCHANTRESS PINK ASTER

VICK'S ENCHANTRESS PINK ASTER

168. Unlike many other Pink Asters, this variety holds its soft, delicate color for a long time without fading. The broad flat petals give a soft effect, which is extremely pleasing. The rare combination of desirable qualities in this new production attracted favorable comment the past summer. Its vigorous, upright habit of growth, the profusion of good, strong, flowering stems, together with the size and loose, graceful effect of the branching type of flower make this variety a very desirable acquisition. Pkt.....25c

PLANTS AND BULBS

TIME OF SENDING.—Many customers order both seeds and plants at the same time, early in the Winter. Seeds are sent immediately, and the plants and bulbs as soon as all danger from frost is past. All plant orders are filled in strict rotation as received. We usually commence shipping about April 20th. [CUSTOMERS IN BRITISH COLUMBIA WILL PLEASE NOTE THAT PLANT ORDERS ARE FILLED DIRECT FROM OUR GREENHOUSES AT SWANSEA, AND CANNOT BE SENT WITH SAFETY BEFORE APRIL.]

PLANTS BY MAIL.—All plants and bulbs (except where noted) are sent by mail, postpaid at prices quoted in this catalogue. The plants have but little soil left on them, but are packed securely, the roots being carefully packed in moss and wrapped in oiled paper.

PLANTS BY EXPRESS.—We always recommend customers to receive their plants and bulbs by express (whenever it is possible), as the stock we send is usually larger and better value for the same money.

NOTE.—We do not pay express or freight charges.

How to Grow Plants in the House

SOIL FOR POT PLANTS.—Ninety-nine out of every hundred plants that can be grown in the house will do well in any good soil that is not too heavy to allow water to run through it readily. A soil prepared after the following formula will answer the needs of the flower-grower excellently: One part ordinary loam. One part leafmold or turfy matter. Mix these together and add enough sharp sand to make the whole so friable that it will fall apart readily after squeezing it in the hand.

(The "turf matter" advised as a substitute for leaf mold is obtained by turning over sod and scraping away that portion of it which is full of grass-roots. This gives you a light, spongy soil, rich in vegetable matter, and almost as valuable as genuine leafmold from the woods.)

A sprinkling of bone meal can be added to give richness, if thought advisable. But we think it best to wait until plant has made some growth before using much fertilizer. At no time should enough be used to produce a rapid growth, for rapidity, as a general thing, means weakness. A sturdy healthy development is what should be aimed at, and the wise gardener will be content with it.

DRAINAGE.—Every pot more than three inches across ought to have something in the way of drainage before filling it with soil. If there is no outlet for water, the soil is soon soured by it. This results in diseased roots, and anything that interferes with healthy root-action will eventually destroy the plants unless the difficulty is promptly remedied.

WATERING.—"Water when the surface of the soil looks dry, and then water thoroughly, and wait until the dry look comes again," is the nearest approach to a rule that can be offered.

Plants in small pots dry out rapidly, and will require watering much oftener than those in large pots. In winter much less water is needed than in summer. Plants not making active growth will need but little water. Plants exposed to the sun will require a good deal more water than those in shade. Hanging plants almost always suffer from lack of water because the soil in them parts rapidly with moisture on account of exposure on all sides to a temperature considerably higher than that at the window-sill.

REPOTTING.—We are not advocates of frequent repotting. We prefer to supply our plants with food in the shape of fertilizers rather than forcing them to depend upon the soil itself for nourishment. Our experience with root-bound plants which have been kept growing healthily by the application of fertilizers convinces us that a great deal of hard work can be saved by paying less attention to repotting than we have been in the habit of doing.

Young plants will require shifting to pots of larger size as their root system develops. To not repot such a plant would be to check its growth at a time when the development of a vigorous root-system is a matter of great importance.

In repotting any plant, large or small, disturb the roots as little as possible. Slip it out of its old pot, put it into the new one, and fill in about it with fresh soil. Water well after you have the plant in its new pot to settle the soil you have added.

FERTILIZERS.—There are many good kinds on the market. We cannot mention any particular kind here, with the exception of bone meal, which has already been spoken of. This we consider a thoroughly reliable plant food.

But let us say right here, use whatever fertilizer you make choice of with great caution. Be governed by the instructions which accompany it. Don't think that because a little is good a great deal must be better. It is an easy matter to kill your plants by being too kind to them.

Never use any fertilizer on a plant that is standing still. Wait until it begins to grow, and then weak applications, increasing the amount as the plant develops. So long as plants grow well, be content to let well enough alone.

INSECTS.—The insect most frequently met among house plants is the aphid or green plant-louse. The preparation on the market under the name of Nikoteen is the best weapon we know of to fight this enemy. Prepare and use it as directed on the package in which it comes. Keep a supply of it on hand, and make use of it whenever you discover an aphid. Do this promptly, and it is an easy matter to prevent the insect from spreading all over your plants, but wait a few days and you will find that the pest has increased a thousandfold.

For scale and mealy-bug we advise an emulsion made as follows:—

One pound good laundry soap and one teacupful of kerosene. Melt the soap, and while it is hot add the kerosene. Stir vigorously until a perfect emulsion takes place. Use one part of this to ten parts water. Spray the affected portions of the plant with it, or apply it with a soft brush, being sure to get it to all parts of the plant where any scale or mealy-bug is to be seen. It is a good plan to go over the entire plant, leaflet by leaflet, applying the mixture with a sponge or soft cloth.

If the leaves of your plants turn yellow and drop without any apparent reason for it, you are safe in suspecting that the red spider is the cause of the trouble. Turn up a leaf and examine it carefully. If you find tiny webs on it you may be sure your suspicions were well founded.

Nothing troubles the red spider but moisture. Showering—not sprinkling—with clear water will rout him if persisted in. Lay the infested plant down on its side and turn on the hose. Do this several times a week until the plant shows no more yellow leaves, and not a web is to be seen. Keep water constantly evaporating on stove and register in winter. Do any and everything that will help to keep the atmosphere of the room moist, but depend upon showering as a general treatment.

AIRING YOUR PLANTS.—Give the plants in your window fresh air on every pleasant day. Open a door or window at some distance from them and let the cold air from out of doors mix with the warm air of the room before it reaches them. This is very necessary, especially in winter, when our rooms are sure to be overheated, and the air in them is depleted of its life-giving qualities.

Rennie's Surprise Collections of Plants

MORE GOOD THINGS FOR ONE DOLLAR THAN YOU CAN GET IN ANY OTHER WAY

We are obliged to grow enormous stocks of Plants, Bulbs, Shrubs, Fruits, etc., generally more than is needed, to make sure of having enough. After the heavy Spring business is about over in May, we make this surplus stock of various good things into Surprise Collections and offer them to our customers, giving them many times the value of their money. These Collections cannot be sent out until about May 20th, and will be entirely of our own selection from kinds of which we have a surplus. No Collection will be made up for less than one dollar, and from that up to any amount the purchaser may desire. They will be sent by Express—purchaser paying transportation charges unless ordered by mail—in which case we omit some of the largest plants to reduce the weight and allow for postage. All Collections ordered previous to May 20th will be booked and shipped then, but we can continue sending them up to the 1st of July. When ordering, ask for SURPRISE COLLECTION, and state definitely if we shall forward by EXPRESS or MAIL.

SHOULD PLANTS RECEIVED BY MAIL LOOK WILTED, PLACE THEM IN LUKEWARM WATER FOR 15 MINUTES.

ROSES OUR LEADING SPECIALTY

HARDY EVERBLOOMING HYBRID TEA ROSES

This class has resulted from crossing the Hardy Perpetuals with the Tea Scented varieties and possesses the hardiness of the first with the free-blooming habit and fragrance of the latter. All have long-pointed buds borne on strong stems which makes them so valuable for cut flowers and in such great demand for table decoration. The greatest efforts of the world's most noted rose specialists during the past quarter of a century have been devoted to this class of rose, and the results achieved have been really wonderful. Not only is every color known in roses now represented, but there are many beautiful shades and color combinations not found in the other types. We especially recommend these roses for flowering from June till October, and have selected those on page 86 as being the best in their color and with the most desirable qualities.

HARDY PERPETUAL ROSES.

These are the "June Roses" so admirably suited for garden culture, the formation of rose beds, hedges, etc. In June and July these lovely roses are brilliant with large, perfumed flowers of richest colors. Many varieties bloom late in summer and even into autumn.

PLANTING TIME.

The broad extent of our country renders it impossible to give any specified date for planting. Mid-spring is the best time, and it is better to be a little early than late. Dormant roses should be planted as soon as the frost leaves the ground and it is dry enough to cultivate.

HOW TO GROW ROSES OUTDOORS.

In preparing a Rose Bed, select a sunny location guarded from cold north winds, if possible. Dig out the beds to a depth of two feet and about three feet in width; then refill the trench with a mixture of soil (any good, fertile soil will do) and well-rotted cow manure, making provision for good drainage if location is not naturally drained. Time should be allowed for this filling to settle, the final top surface being an inch or two below the edges of the bed. Do not raise the surface of rose beds above the surrounding surface. They suffer less from drought when left level with the turf.

Plant your Roses in the centre, being very particular to press the soil firmly around the roots, and soaking the bed thoroughly at the finish. The Everbloomers may be set 18 inches apart; the Hardy Perpetuals about 2 feet. After the plants have been set out, keep the soil loose to the depth of an inch or two, by frequent stirrings. An occasional soaking with weak manure water is a great help to Roses of all sorts.

Protect for the Winter by covering bed at least 6 inches with leaves or manure; a binding surface of dirt, corn-stalks or boughs on top. A convenient method is to confine this dressing by an enclosure of 12 inch chicken wire.
